Reference: Expert Wellsite Geological Services for your land well operations

With oil and gas prices on the rebound activity on and offshore has started to pickup. Many experienced professionals left the industry during the downturn of the past few years. Shortfalls in qualified personnel are being reported in some areas such as the USA. Geostart and Associates can deliver the expertise you need.

Mudlogging unit

Oil field - Azerbaijan

All our wellsite consultants have 20 years plus industry experience on and offshore in a variety of play environments and are competent at;

- Mudlogging QC and supervision
- Gas and oil show evaluation and reporting. Oil shows are reported using our numerical system enabling them to be plotted alongside other logs.
- Core picking points, core handling, description and reporting
- Geosteering
- MWD QC and evaluation
- Wireline QC and evaluation
- Well sampling and pressure testing using MWD and wireline
- Integrating mudlog gas, gas ratios and shows with petrophysical logs
- Geo Pressure Evaluation from cuttings, gases and petrophysical logs
- Pre well planning, well operations and post well recording, reporting and well data management

Core Head

Core Catcher

Core flapper catcher

Dependent upon location, it is possible to keep the same staff for the duration of the drilling project, thus ensuring consistency of methodology and evaluation.
